this work covers sequence based protein homology detection a fundamental and challenging bioinformatics problem with a variety of real world applications the text first surveys a few popular homology detection methods such as position specific scoring matrix pssm and hidden markov model hmm based methods and then describes a novel markov random fields mrf based method developed by the authors mrf based methods are much more sensitive than hmm

and pssm based methods for remote homolog detection and fold recognition as mrfs can model long range residue residue interaction the text also describes the installation usage and result interpretation of programs implementing the mrf based method
